

Home Page

1. **Skills:** I can build any furniture that you can think of. Anything from a bed that is lined with fabric to a solid wood book shelf. I have built coffee tables benches book shelves entertainment centers kitchen tables and much more. I have been building furniture with my dad since I was in the 8th grade and it just comes naturally to me. All the furniture that I build is reinforced with screws not nails. Although nails are faster screws give it the durability that I guarantee.
2. **Customization:** All my furniture can be custom altered. If you want a different piece somewhere else or you want it taller or shorter I can do that. The sky is the limit for my furniture. Depending on the size of the furniture will determine the time it takes to build but I body guarantee furniture to be done no more that 3 weeks from the date of order
3. **My Building Process:** If planks are slightly cupped or twisted, have them planed at a local millwork shop or borrow a tabletop planer and tackle the job yourself. If planning yourself, first check planks for and remove nails and excess dirt*. Run planks though the planer, stripping a small amount of wood from each side as you plane. While the board is going through the planer, manually adjust the depth of the cut to compensate for irregular thickness (or twist) over the board's length. You can hurt yourself or damage the board or planer if you do not manually adjust as you go. Keep running boards through the planer until the blade has lightly stripped each surface. Next, rip boards on a table saw to create straight edges; planks do not have to be identical in width. I do my

best to get all my materials from a reputable lumber yard and all the wood is pre-dried so I can begin building your furniture today.

4. **Quality:** So, I think for this website I need to have a lot of detailed instructions of what the furniture is made of. The most recent project that I did was the kitchen table for my wife. The table is made of solid pine. We were also able to make it the exact color we were wanting. The top of the table is stained and the legs are painted white. You need to Be sure wood is dry. Material from a job site or floor joists that existed in a crawlspace may have high moisture content; material from a conditioned space should be dry. Wood can be dried in a kiln or stored inside through the winter. If you don't have time to wait the winter for it to dry stack wood in a hot dry place with 1" spacers between layers. Allow to dry for at least two weeks. Rough-cut boards to the desired length, plus 2 inches. A final cut will be done after the planks are joined

Shop

1. My shopping cart will have all of the furniture that I can build and also examples of the furniture that I have built so you can get ideas on what you want your furniture to look like.
2. Anything on this furniture can be customized. There will also be a section that will allow you to upload pictures and submit it to me and I will be able to get in touch with you with plans for the customized furniture that I can build you. I will not start on the building until I have approval from you and a deposit to pay for some materials.

Collections

1. I have built all the furniture for mine and my wife's apartment and I feel it all goes great together. So what I am going to try and do is gather all of my furniture that I have built and group together the ones that I think will look great together and put them in a group called collections. Those collections will also be able to be ordered together. The table that I have built and our T.V. stand really complement each other
2. Furniture can be made of any material that you want and can either be stained any color or painted any color that you want. There are so many options to choose from that you will not know where to begin so I think the collections will really help because it will give you an idea of all of the options that you can get in the furniture that I build.

Gallery

1. **Pictures with stories:** I think that a gallery showing off all of my work should also be included in the site. And I think it would be cool to tell a little story for every piece of furniture that I have built. For example I built a table for my wife for Christmas and she had no idea that I built it for her. I hid it at my brother's place till Christmas eve and then picked it up that morning really early and when all of the presents were opened I told my wife to go outside and she was so happy that I built the table for her.

Learn

1. **My Story:** I have been building furniture since I was in middle school. Every day after

school I would come home and help by dad with all his projects. We had one big project and it was a large book shelf 10 feet tall by 12 feet wide it was an amazing feeling to be able to put it in the office finished and it looked amazing.

2. **Testimonials:** There are many people that have testimonials about my furniture. All of the furniture I build is custom made and people really appreciate what I do with the furniture that I build. There are many variations for the same furniture that I have built. Anything from different doors or different screws.
